Detailed Project Location/911 Address if Available: _____

Fire Suppression/ Sprinkler System

Estimated Maximum Flow Rate GPM: _____
Total Distance from Water Main to Fire Suppression Connection: _____
Total sprinkler heads: _____

Requirements

- An Engineer's Report detailing calculations for water flows/demand/psi required
- A Yearly Inspection Report including Testing of BFP, (Back Flow Prevention Device) condition, and operation of device. Applicant must submit the Inspection Report on an annual basis; failure to provide the report may result in disconnection.
- Inspection and Testing Notification of required fire suppression/sprinkler system needs to be 5 days prior to event.
- Each fire suppression/sprinkler system shall be connected to the water main line individually.
- The applicant must furnish the Department with a complete set of engineered drawings that show the location of all valves, pipes, hydrants; tanks, sprinkler heads and other appurtenances. These plans will remain the property of the Department. The Applicant must also furnish engineered drawings of any later revisions to the piping or appurtenances when they are made. All water main extensions or alterations must be submitted to the Board on a detailed, workable 24" x 36" print drawing to 1" = 50' or 1" = 40' scale and presented in triplicate at least thirty (30) days prior to the anticipated date construction is to commence. Failure to provide all required materials may result in disconnection.

Materials Required at Owner's Expense

- BFP (Back Flow Prevention Device)
- Gate Valve
- Gate Valve Centering Disc
- Gate Valve Extension Stem within 2ft of grade.

Fire Suppression/Sprinkler System Application Permit

General Information
